Power Pack

Specs:

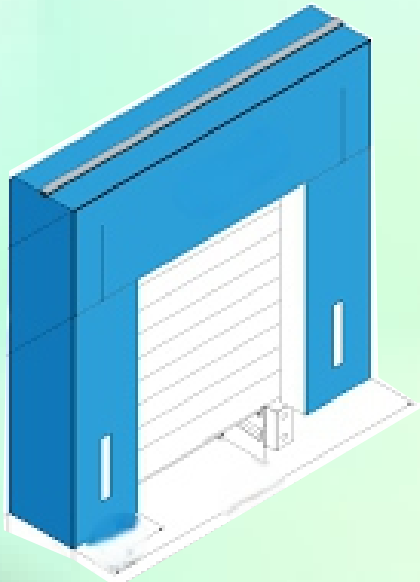

Capacity : 6 ton to 15 ton
Size : Customized
Power Pack : Hydraulic
Make : European
Model : Swing Lip
Power : 1.5 KW
Safety : Non Return Valve
Oil : Hydraulic no 60
Tank Cap : 6 liter
Refuel : 6 month

DOCK SHELTERS

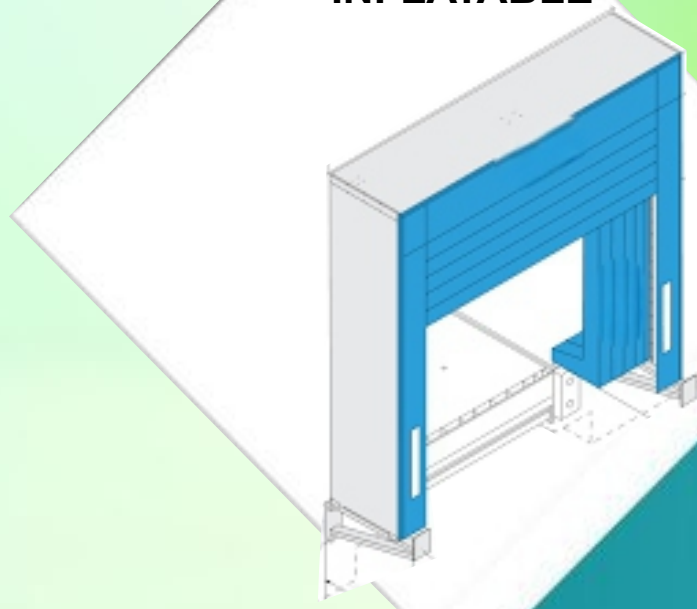

Dock shelters, designed to seal the gap between a building and a truck during loading/unloading, typically feature dimensions like heights of 3280-3680 mm, widths of 3250-3450 mm, and depths of 600-900 mm, with curtains made of durable, double-layer polyester

Controlled Environments

Industrial sectional overhead doors are important for agricultural businesses. These doors protect the quality of crops after they are harvested. They can be insulated and have door seals— helping to maintain conditions in the building. Sectional overhead doors are best for warehouses and storage buildings where it is necessary to keep the temperature the same.

HYDRAULIC RISING BOLLARDS

With **Security Bollards** in place, you can ensure that only authorized vehicles are allowed onto your property, reducing the risk of theft, vandalism, and Anti-Social activities. Another important benefit of driveway security bollards is that they can help reduce vehicle-related accidents.

TYRE KILLERS

Tyre Killer is an electro hydraulically operated heavy duty spike barrier which rises above the ground level on giving a valid input signal and thus prevents unauthorized intrusions at entry/exit points of high security premises.
